

standard base, a linker, and a 3' sequence complementary to the extension product of the second primer;

- (d) enzymatically extending the allele-specific primer of step (c);  
(e) hybridizing a reporter oligonucleotide complementary to the 5' non-complementary sequence of the second primer of step (a) to the extension product of step (d);  
(f) contacting a capture oligonucleotide coupled to a support with the product of step (f); and  
(g) detecting hybridization of the reporter oligonucleotide to the capture oligonucleotide.
